UI List with Specification

This document are made for explaining the details for all the UI in our game “Exorfist”, to let WHOEVER read this to understand how the UI could be look like in this game, however, some of the UI details are still arguable before made. All of the UI in this document are taking references from famous game series such as Like a Dragon Series, Persona Series, GTA series, Sleeping Dogs and other online resources.

Overall UI Notes

- All of the **Example Image** shown in this document are only for the shape, visual reference purpose, for the actual color and Artstyles please stay with the original intention mention by Jaw Cherng in GDD. Quoted “Painterly-style textures that look very story bookish.” and “Dark Fantasy but with a Chinese mysticism twist. So a lot of dark blues and red. ”
- The Shape for the 4 Button on the right side of the screen(Ability, Light, Heavy and Block) can remain circle if the time for changing it is not enough at the time making, else the shape of the button should be **Rhombus** as shown before in the weekly slide.

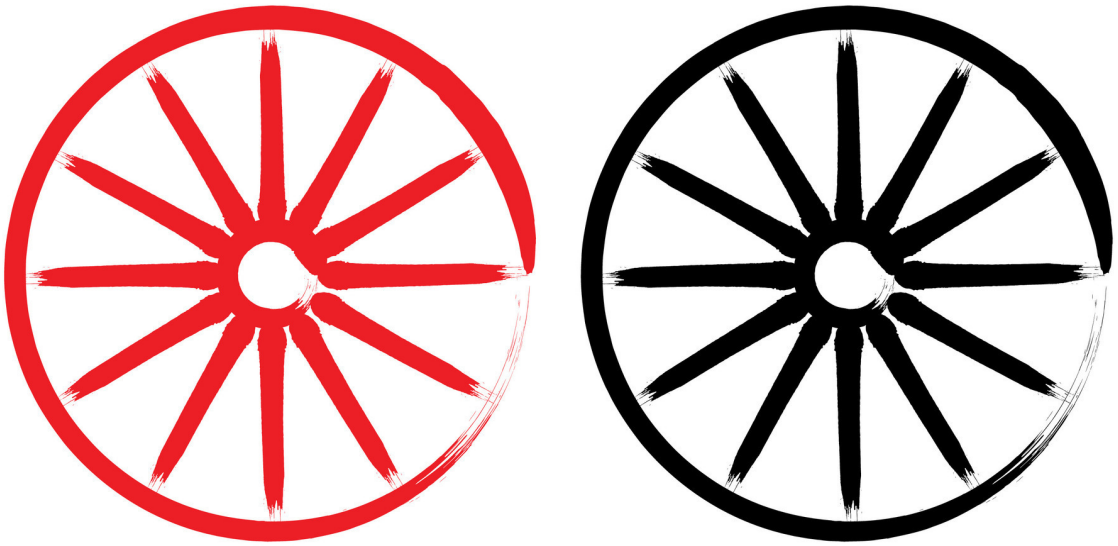

Main Menu UI

The Character Model - As shown in the UI mockup, the MC should have a idle or fixed fighting pose model put on the left side of the screen, taking half the screen is fine

“Fight!”(Start/Play) Button - The only Main Button to shown of the right side of the screen, under the Title of the game “Exorfist”, Consider putting design for the border of the button that more closer to what Jaw Cherng want, stated in Overall UI Notes.

Setting “Wagon Wheel” Button - the setting button on the top right of the screen

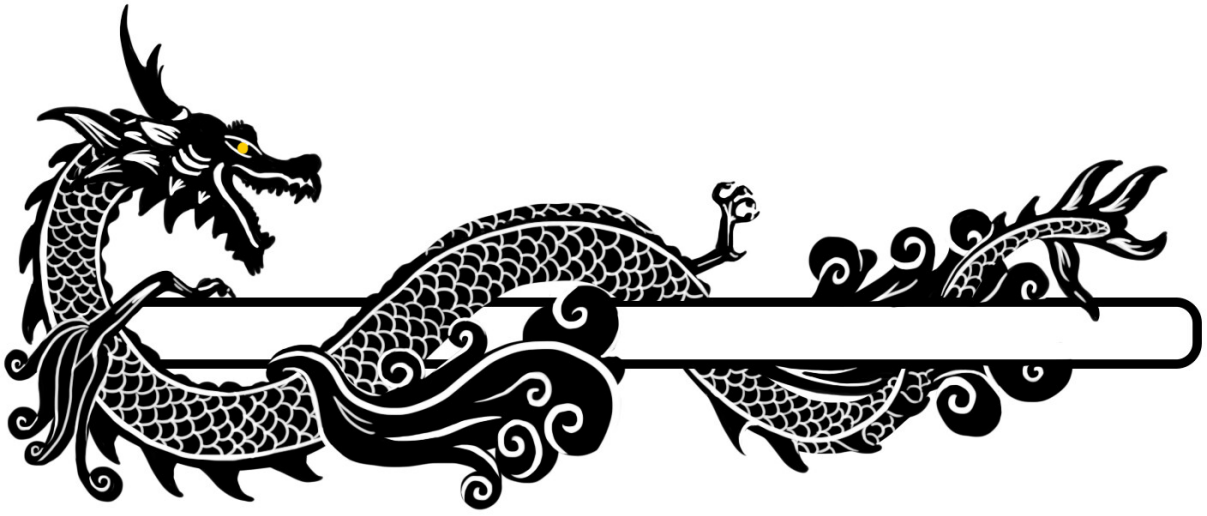

Result Example Image:

Gameplay UI

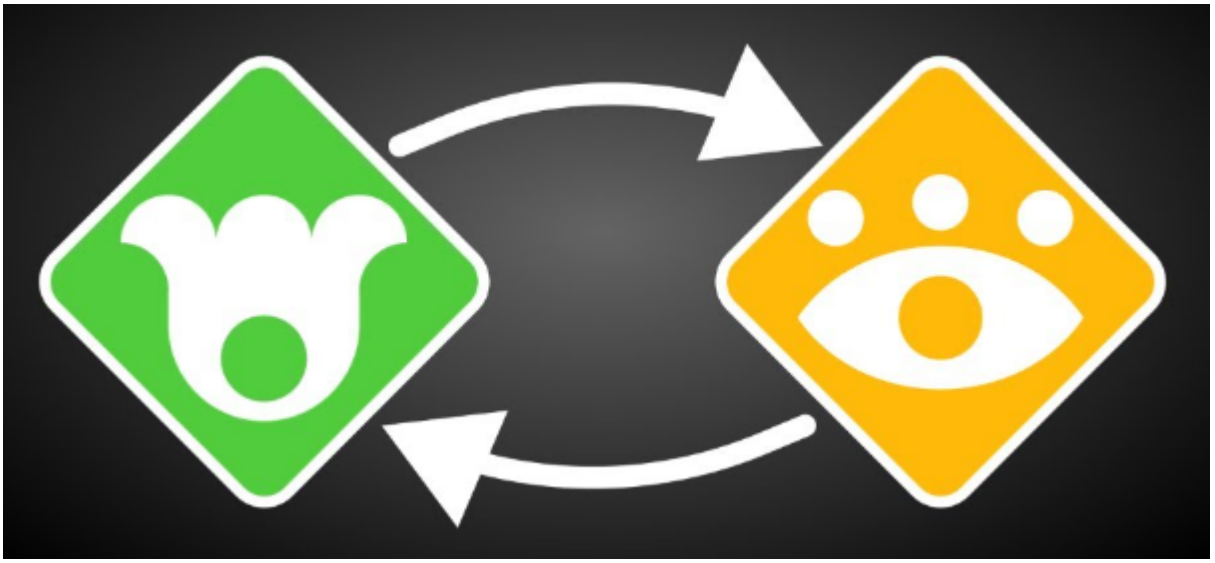

Health Bar - Using the element from Chinese dragon, treat the dragon as the border/bracket of the health bar, with the red health bar inside.

Example Images

Switch Ability Button - considering design from the reverse card in UNO and recycle sign.

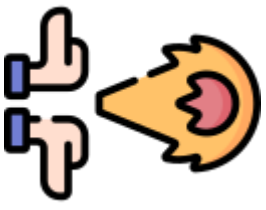

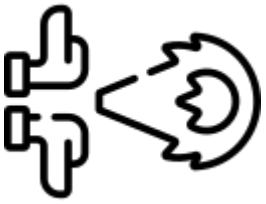

Ability 1(AOE) Button - Consider the pose from superman and ironman for “superhero” feel from them

Ability 2(Laser) Button - Considering Dragon Ball’s feeling for the beam

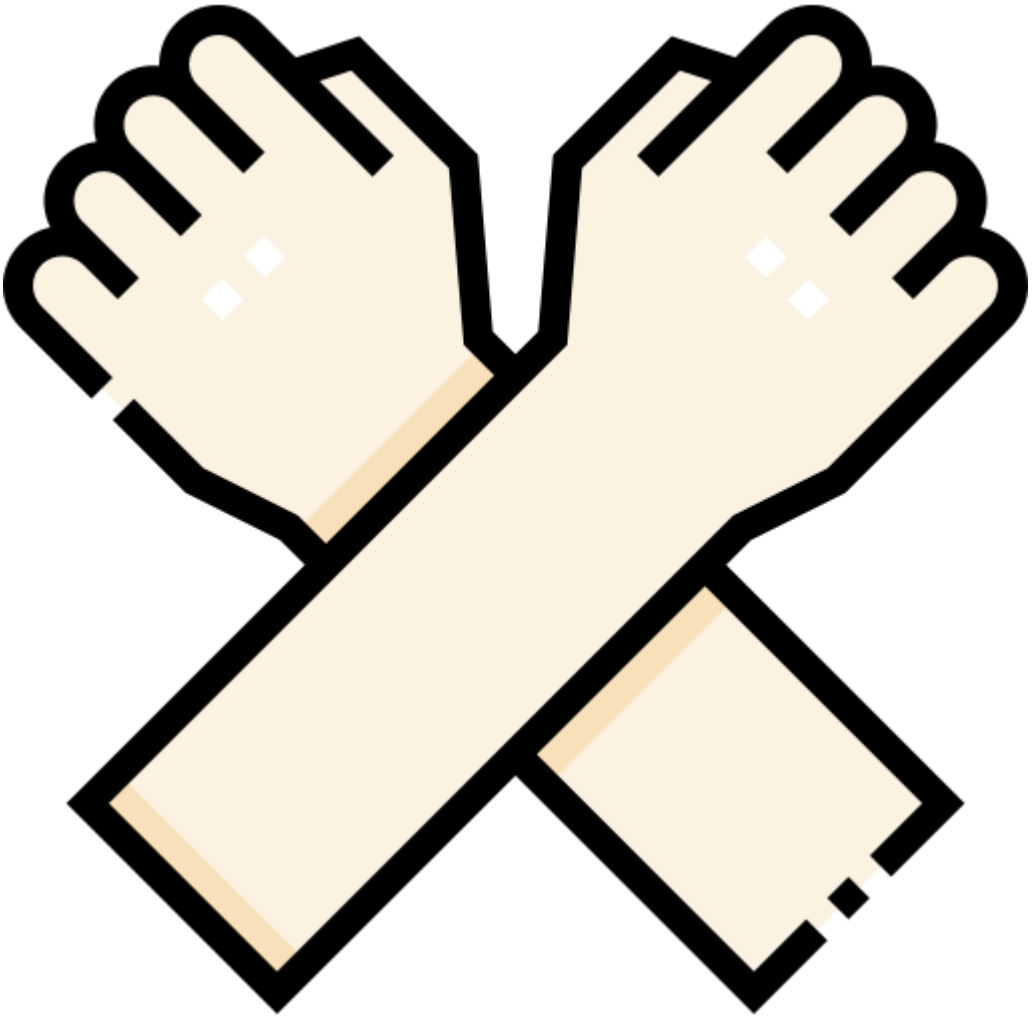

Ability 3(Restore) Button - its a healing ability, the icon should subject to change after the animation for healing(if any)

Dodge(Parry) Button - As we are using both hand to parry the attack from the enemy, draw the exact pose on it.

Light Hit (Punch) Button - Draw fist to directly tells the player this is punch, player shall tells the light and heavy by the damage he dealt instead of words.

Heavy Hit (Kick) Button - Draw feet to directly tells the player this is kick

Pause Menu Button - Using words ”Pause” to directly tells the player where the button to stop the game, in oval shape, stay at the top right of the screen when in game

Enter Room UI

For these UI, the overall set up remain same as what we have in POC, but with bigger Yes and NO Button on the screen.

The text to ask player enter the door or not

Enter Room Yes Button - Simple YES Button in Circle shape

Enter Room No Button - Simple No Button in Circle shape

Result Example Image: Could use dragon for border design, but that is a nice to have thing.

Setting TAB UI

Close Button - Exact same shown as image below

Sound Button - To on and off Sound in the game, Just add a slice white line to the icon when off is selected.

Music Button - To on and off Music inside the game(if any), Just add a slice white line to the icon when off is selected.

Vibration Button - On and Off, Just add a slice white line to the icon when off is selected.

Example Image: This example is very close to what the UI could looks like, but change to with 3 button in a horizontal arrangement plus a close button for the setting tab to be closed.

Pause Menu UI

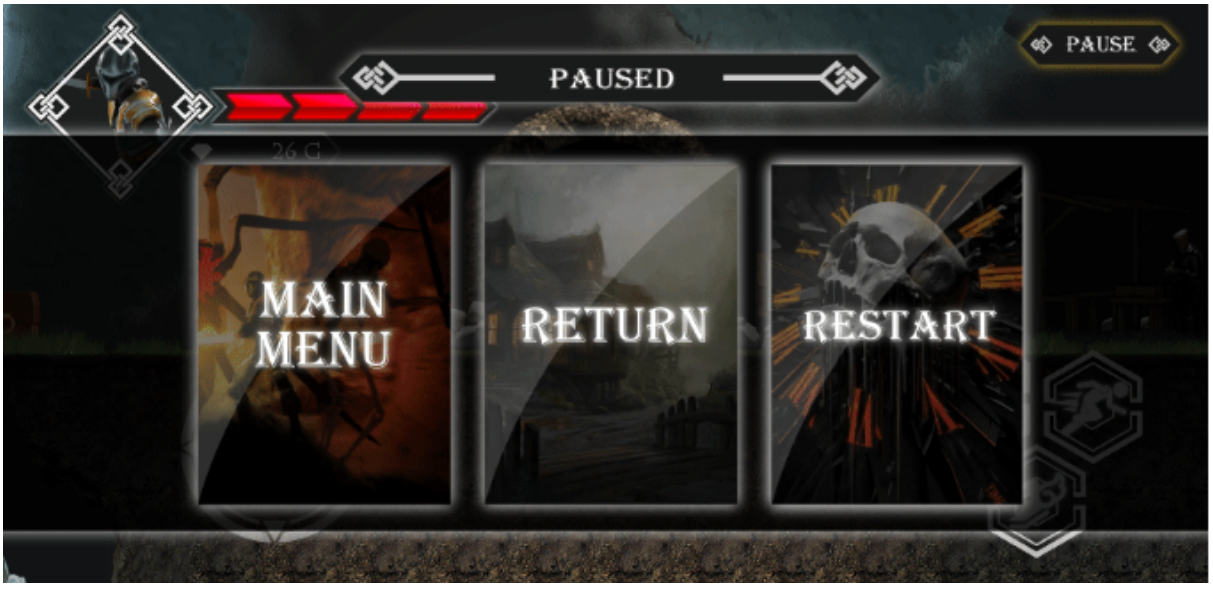

Return Button -

Setting Menu Button

Restart Button (Restart the player to the start)

Main Menu Button (if there is a main menu for player to see)

Result Example Image Design 1: We'll having 4 "cards" in here including the "Setting", feel free to slice smaller. In the case of short time we have, choose design 2 to save time.

Result Example Image Design 2 : This is a much simple version for the case of short time

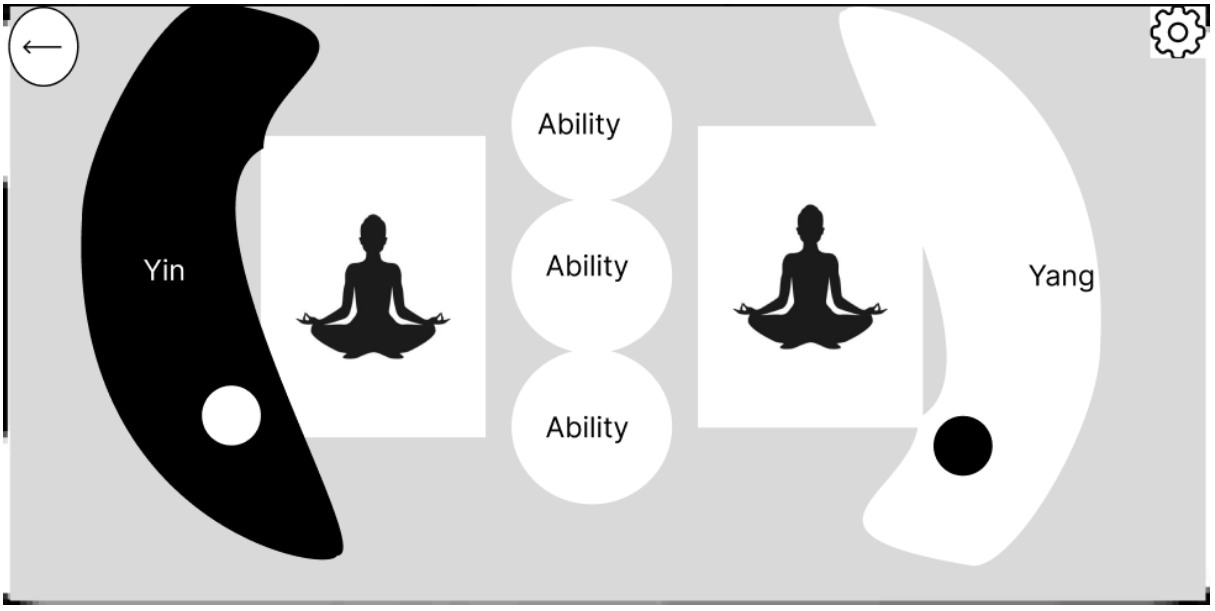

Meditation Statue Select Menu UI

Ability Icon design - use the same icon from Gameplay UI, but with white/color background

Ability icon usage - Let player able to choose between 3 ability to upgrade, press once and go to each of their own individual upgrade menu.

Example Image:

Meditation Statue Upgrade Menu UI

Ability Icon - larger version to show clearer, same background as in Select Menu UI

Upgrade Tab - we'll have 4 of these, each of them should come with a progression bar, description about the actual thing going to take effect after upgrade, description about the exact data of the thing change to the ability, and the cost for each level upgrade

Progression Bar - Gold color

Example image:

Words list

description about the exact data of the thing change to the ability :

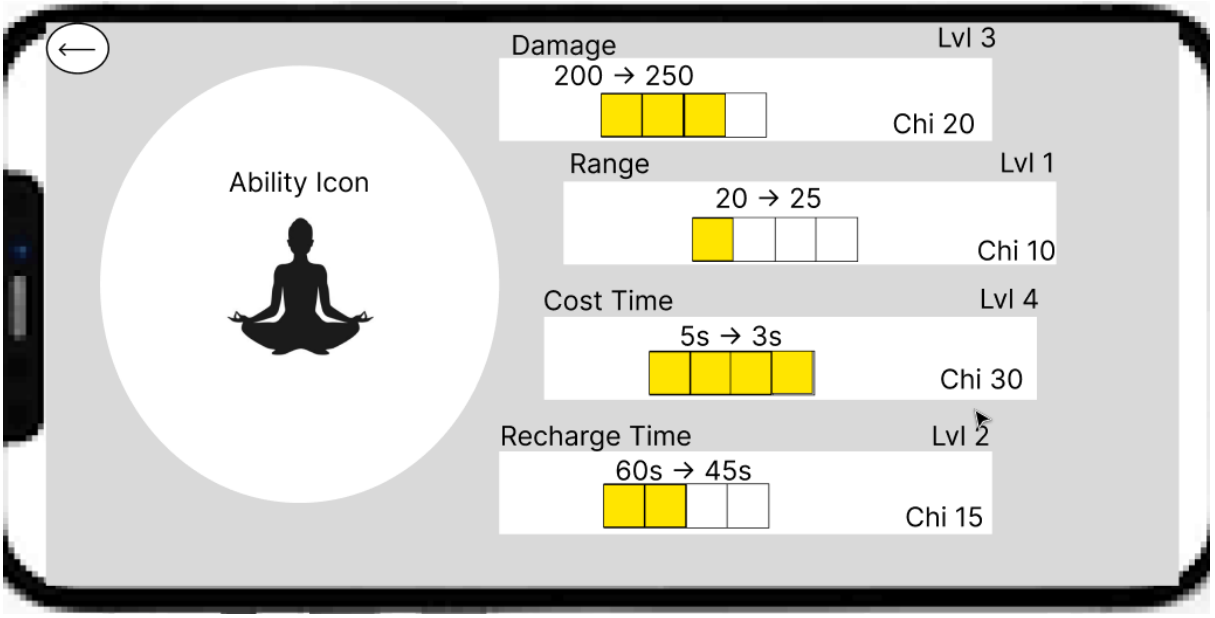

1. Damage
2. Range
3. Cost Time
4. Recharge Time

    Description about the actual effect going to happen after upgrade :

Level 1/2/3/4/ depends on actual amount of levels being designed to upgradable

Chi Price 10/15/20/25/ depends on actual price use
